

FULLSTACK WEB DEVELOPER

Hello, I'm Patryk Szram.

I have over a decade of experience in the field of web development. I focus on designing and developing responsive web applications tailored to the client's business needs. My expertise includes application architecture, structuring applications, selecting optimal technologies, and implementing solutions to ensure the productivity and performance of applications. I design strategies to streamline processes related to the deployment and development of applications. Additionally, I possess skills in graphic design for publication and web design based on knowledge of the latest UX/UI trends.

NODE/NPM

CI/CD

Experience

Raiffeisen Bank International AG in Warsaw, Poland

3 years and 7 months

PRESENT

JUN 2021

MAY 2020

Senior Frontend Developer

In my role, I was responsible for maintaining and developing an internal CRM web application for internal bank employees to serve clients from across Europe. This involved ensuring the highest quality of application code, designing and implementing solutions in collaboration with UX designers. I consistently focused on achieving a minimum 80% unit test coverage for the entire source code of the application.

JUN 2021

MAY 2020

Frontend Developer

Before starting in this role, I possessed only theoretical knowledge of the technology. Proficient knowledge of the Angular framework, NgXS, and a comprehensive understanding of Material Design system concepts were essential for the position. Handling all project-related tools was crucial in meeting all requirements and achieving the business goals necessary for a promotion in the role.

MAY 2020

NOV 2018

Lead Frontend Developer

I was responsible for the complete technological transformation of web applications. I oversaw the transformation process, actively participated in technology selection, strategy planning, and recruitment processes. I rewrote applications from Polymer to the Vue framework while maintaining total integrity. I designed an application for drawing graphs based on BPMN 2.0 standards. This tool enabled the creation of optimized processes, significantly improving the efficiency of production halls for one of the leading manufacturers in the construction and metallurgical industry in Poland.

NOV 2018

MAR 2017

Senior Fullstack Developer

I was responsible for overseeing project teams, with a primary focus on ensuring high-quality code delivery and efficient collaboration. As a team coordinator, I ensured coherence in technology selection and the effectiveness of team activities. I actively organized training sessions aimed at standardizing developers' approaches, eliminating errors, and enhancing the team's skills. My duties included comprehensive coordination throughout project implementation, from preparing the team environment to production deployment.
